Keymacro is a free software that allows you to record macros and program sequences of keyboard actions. The goal is to avoid complex copy-paste actions and speed up the work with a program without having to move your mouse. Keymacro allows you to save the sequences of actions and to launch them from the program itself.

Moreover, the utility supports both Ctrl and Alt keys (as well as the Windows and Linux shortcuts) and is integrated into the program in order to do not require to install external packages. Unlike traditional recording tools, Keymacro lets you customize the sequence by defining the delay between the keys or simply skip the already recorded actions (e.g. change the keyboard from the left to the right side). Also, the program allows you to remove the delay of the actions, set the length of the sequence and automatically repeat its parts. How to record and launch Macros The best part of this application is the very simple installation procedure. Once the file is launched, you will be asked to provide a name to the macros. In addition, you can choose whether the macros will be automatically launched after saving or will be accessible from the toolbar. At the end, you can launch the

macro from the icon placed on the toolbar. Keymacro is free software and requires only a file extension that stores the recorded sequences of keys. Furthermore, the program also offers two other options such as the translation from English to another language or the conversion of the ASCII to Unicode.
