By simply adding a star to a layer, you can organize many layers in the workspace. This way, you can find the layers in groups separated by the stars—or you can easily drag them. If you notice a mistake while organizing, you can go back and edit your layered effect at any time. However, if you don't like anything in the collection, you can revert back to the original state by simply clicking a star. Anything you do that's permanent (like disorganizing layers) is kept track of in the side bar, so you can go back to it. You can also toggle on display options such as the grid and labels, so you can see exactly what you're working on. You can even change the order with the drag bar. This way, you can work with multiple images and see them brought up at once. Want to separate a logo from a background? With one simple click, you can do exactly that. Each layer in Photoshop Elements is made up of several nuances. In other words, if you have layers for a header and a background, you will have separate layers for the header and the background.
